

```
public class EmployeeExec {  
  
    public static void main(String[] args) {  
  
        ApplicationContext ctx = new ClassPathXmlApplicationContext("jdbc.xml");  
        EmployeeDAO empDao = (EmployeeDAO)ctx.getBean("employeeDao");  
        Employee employee = new Employee();  
        employee.setEmployeeName("Robert");  
        employee.setEmployeeDept("airforce");  
        employee.setEmailId("sam@airforce.org");  
  
        empDao.saveEmployee(employee);  
  
        //getting the data  
        Employee emp = empDao.getEmployee(5);  
  
        System.out.println("Employee name :"+emp.getEmployeeName());  
        System.out.println("Employee email :"+emp.getEmailId());  
        System.out.println("Employee department:"+emp.getEmployeeDept());  
  
    }  
}
```
